subject Letter of Recommendation

This is a personal recommendation for Aslm El-Gharabawy. He completed an internship for his study at Delft University of Technology at my engineering section in the period of October 2012 through April 2013. I found him to be very focused, diligent and persistent on his assignment. His will to succeed and ability to learn and develop surprised me in very positive manner.

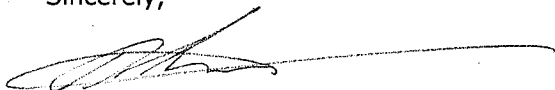

During the course of his internship, Aslm has demonstrated that he can absorb technically complex information very quickly. The fact that he could implement this data into a conceptual design in an early stage of his assignment made his talent for research and development very apparent.

Aslm adapted quickly to his new working environment and blended in smoothly. His fresh and unbiased look on matters showed the section co-workers how innovation can be approached and turned into a value adding activity. I personally found this very inspiring and enjoyed both the journey as well as the result.

Besides Aslm's technical and comprehensive skills he is a pleasure to work with. He has the intractability of a young academic but does not seclude himself from advice and influence from his environment. Therefore I believe he has all the ingredients to be successful in the field of research and development.

At KLM Engineering & Maintenance we were pleased to see that our young generation of technical academics is so resourceful en motivated. I believe Aslm is an excellent example of this generation.

Sincerely,

Dennis Koning
